Sonar Imagery

Preprocessing

Pipeline applied: grayscale conversion, non-local-means denoising, CLAHE contrast enhancement, and min-max intensity normalization.

Notes

This report was generated automatically by SONARIS. Detections marked REQUIRES_EXPERT_REVIEW have not been confirmed by a human operator.

Disclaimers

Risk score is an operational prioritization aid and is not a certified maritime safety assessment.

Confidence represents model confidence and does not prove object identity.

SONARIS was not used in historical incidents referenced by the application unless explicitly stated.
